

## Pearl Street Library on the Town of Enfield Network Information Sheet

### Overview

The Pearl Street Library has been added to the Town of Enfield Network. This will enable the library staff to utilize the Town email system, save files to a file server that is backed up nightly, share files with other library employees from either location, view the Town of Enfield Intranet, give the Enfield Central Library employees the ability to log onto Pearl Street Library staff computers with their domain usernames and passwords to access network resources available to them and allow printing to other sites on the network.

The public computers are also part of the Town of Enfield network. From the public point of view, there will be no noticeable difference from the previous setup except that internet speeds will be multiple times faster than the previous connection.

As a Town, this move has some very beneficial parts. The IT Department now has the ability to manage the computers remotely; allowing updates of virus software and important operating system patches to protect the computers from malicious attacks.

### Highlights

- Pearl Street Library is part of the Network Infrastructure for the Town of Enfield for faster Internet access.
- Staff can access Town network resources.
- Files and printers are shared for a greater level of efficiency.

### Interaction with Other Systems

- Staff and public computers can access the Internet provided by the Town
- Staff computers have access to Town network resources for email, files sharing and Intranet information.

### Project Details

- IT Project #: 04-35
- Deployment Date: April 27, 2004
